

Campamento Dining Hall Measurements for screening

There is a 6 to 7" space between the top of the wall and the tin roof with rafters sitting on the top of the wall and overhanging the outside about 2 feet. See photo 10. The concrete half wall is 42" high. The total height of the wall varies from 106.5" to 108" high. The total height of the space to be screened varies from 64" to 66" high. We are uncertain of one of the height measurements for the open space. We wrote 61" for one end, but now doubt the measurement.
